S3 Figure: Recorded Cost and Performance

Candidate number: 1102384

Figure S3 shows recorded performance and cost by model, configuration and task class. It can be read as a cost–performance Pareto-frontier plot: within each panel, a result is Pareto-efficient when no other result is both less costly and higher-scoring.

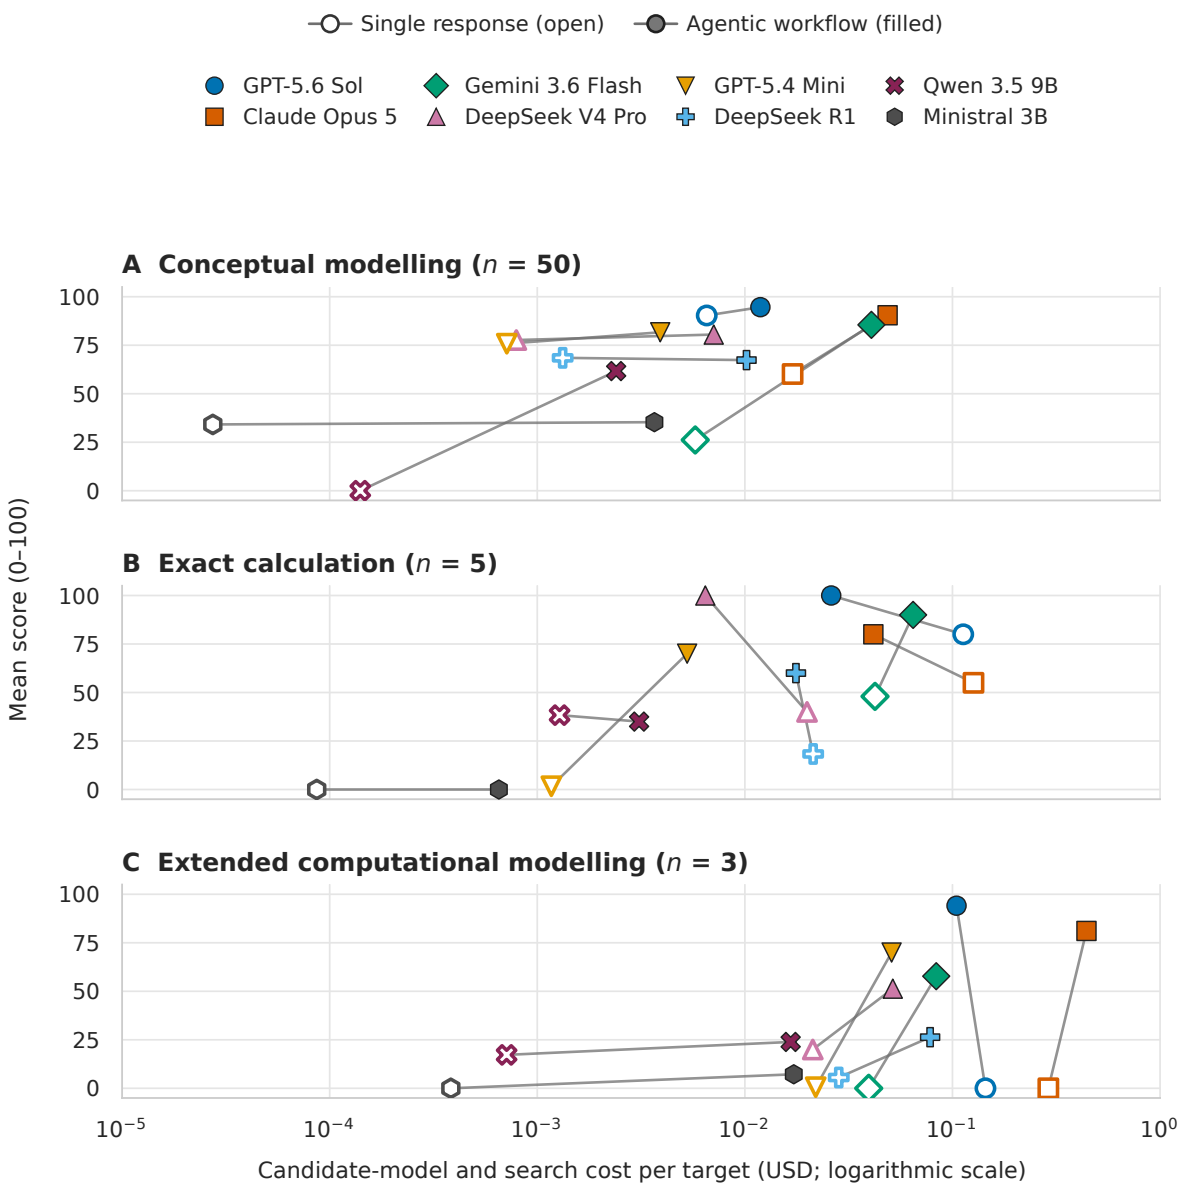

Figure S3: Recorded cost and performance. Open and filled markers denote the single-response and agentic-workflow configurations; lines connect the two observations for each model. Horizontal position is recorded candidate-model plus search expenditure per target on a logarithmic scale. Scores are means for 50 conceptual questions, five calculations and three extended tasks; panels use different scoring systems and are not directly commensurate.
